6.0.0

Add manifest for Funky Flounder v6.0.0
default.xml: Update meta-raspberrypi
Add manifest for FF rc7
Change flounder branch default manifests
Add gitreview file for flounder branch
Add manifest for Flonder rc6
Add manifest for Flounder RC5
Add manifest for FF rc4
Switch meta-updater-qemux86-64 back to rocko
default.xml: Update meta-raspberrypi
Add manifest for FF RC3 v5.99.3
Pin meta-ti to revision with dra7x-evm-lcd-lg included
[RCAR] Fixed revision value for R-Car.
Uprev component layers to latest rocko tags
Uprev meta-raspberrypi to latest branch head
Minor formatting in default repo files
Add manifest file for FF rc2 v5.99.2
Remove porter repos which are no longer used in FF
Add manifest for Funky Flounder RC1 v5.99.1
[RCARGEN3] Update Renesas Rcar Gen3 BSP to 3.7
Add EE 5.0.3 manifest to master
default.xml: Support Raspberry Pi 3 B+
[RCAR] Update Rcar gen3 BSP to 3.6
Update meta-raspberrypi for wic image issue
Use fixed revisions for meta-security and meta-security-isafw
Add eel_5.0.2 manifest to master branch
Add KingFisher support for Rcar gen3
default.xml: Update meta-updater*
Fix build for dragonboard-410c by updating layer
Fix build for cyclone5 by updating layer
agl-sota: Remove meta-rust
agl-sota: Add meta-updater-qemux86-64
Fix branch name of meta-sdl repo
Update meta-sdl to 4.4.0
Add new rocko branch of meta-boundary and fix default-floating.xml
Change to meta-security layer
Add manifests for DD 4.0.3 and EE 5.0.1
Start migration to rocko with external repos
manifest: add meta-gplv2 layer
Add manifest file for EE 5.0.0 release
Add manifest for Electric Eel rc5
Add manifest for Electric Eel rc4
Add gitreview file for flounder branch
Add missing packages for LXC container
Fixed xds package url (must be http not https)
Bump nodejs to 8.x
Update XDS repo url and allow to set release branch
make build: fix output log file name
make build: improve timestamps on output
Fix typo in apt.conf.d
Add debug output to apt network calls
Make curl calls verbose and apply timeouts
make build: add timestamps on output lines

6.0.0

setup_image.sh: exit with error in non interactive (=jenkins) mode
Add timeouts and retries to wget calls
Don't remove kernel sources from SDK in install_sdk script
bump to 5.99 (pre-FF)
Protect already taken IDs
Change share directory path
Improve gpg import key during image creation
Add package apt-utils to default image
10_base: install gpg first before any other package
add g++ multilib package
add journalctl support for user devel
bump version to 5.0
Bump distro for Funky Flounder v6.0.0 release
linux-firmware_%.bbappend: Avoid rpi file duplication
agl_raspberrypi3.inc: WiFi on Raspberry Pi 3 B & B+
Cut Flounder RC7
Uprev the nogfx machine include to the same state
af-main & af-binder: Version Funky Flounder
Post rc6 bump and use of flounder branches
Add gitreview file for flounder branch
Prepare Flounder rc6
agl-services: Add missing dependencies to glib2
profile-graphical: agl-service-mediaplayer: add agl-audio-4a-framework DISTRO_FEATURES check
agl-profile-core/packagegroup-agl-core-boot: add rng-tools
af-binder & af-main: Update to version 5.99.FFRC6
Update low-can, signal-composer version label
Update afb-test revision for FF.RC6
scripts/mkefi-agl.sh: fix cleanup
Post FF rc5 merge window open
Cut Flounder RC5
meta-agl-bsp: meta-ti: amx3-cm3: Add a fix for security_flags.inc
Update afb-test revision
wayland: Remove unrecognised option "--enable-ivi-shell"
Bump distro post-rc4
Prepare FF RC4
Signaling bindings: Bump for version FF.RC4
Add the afb-test binding in the devel AGL image
af-binder & af-main: Bump to version FF-rc4
Change the default sdk install path
Add lua-dev and lua-staticdev to minimal crosssdk image
Bump post release
Make it possible to use systemd-coredump for development
[Work-around] Update recipe for ImageMagick to avoid bitbake error
Port the latest version of valgrind
af-binder & af-main: Add external binding feature
Prepare rc3 release
Mask conflicting variables from package_write_rpm hash
Add machine templates for qemuarm and qemuarm64
Revert "[rcar-gen3] Disable ipv6"
Remove deprecated WiFi binding from core services
Fix do_patch[depends] statement
linux-firmware: Enable WiFi for Raspberry Pi 3 B+
[RCAR] Update URL of R-Car's Evaluation Software

6.0.0

weston.ini: set proper configuration to panel-position
Reduce fixed memory split on RPi3
packagegroup: core: devel: add agl-service-network-tools package
profile-core: agl-service-network: add agl-service-network-tools package
meta-rcar-gen3: weston-ini-conf: drop v4l2 feature
af-binder: Upgrade
pulseaudio: remove 10-unload-modules.pa
We pin on 4.9 linux-ti-staging for now.
Remove touchscreen addition
meta-agl-bsp/meta-rcar-gen3: modify audio card name on rcar device
Remove porter reference from meta-agl
Fix agl-demo-platform-html5 broken build
Make pulseaudio conditional for packagegroup-agl-core-multimedia
pulseaudio: remove unused .patch files from the repository
Post-rc2 bump
Re-add dra7-evm-lcd-ig.dtb as it the screen of the board in CI
Fix old bbappend in meta-qcom
Introduce buildstat summary for CI builds
linux-ti-staging moved to 4.14
Update Signal Composer revision
packagegroup-agl-core-devel: add jq and libxslt-bin to parse result files
af-main: set relax handling for apps signatures even when agl-devel is not set
agl-service-can-low-level: bump revision.
most: apply conditional backport patch for kernels older than 4.13
Bump gpu memory on rpi3
Matrix reloaded Funky Flounder RC2
Enable weston to use systemd notify
linux-renesas: kernel: backport pn533_usb fix from upstream
af-main: Bug fixes
af-binder: Bug fixes
Enable autorev again for master
agl-service-radio: added dependency to libusb-compat
Activate missing kernel options for 4a
agl-service-can-low-level: Remove low-can-service from homescreen
Bump version number to FF rc2 v5.99.2
Enable agl-audio-4a-framework in CI
Revert "linux-ti-staging moved on to 4.14"
linux-ti-staging moved on to 4.14
neard: systemd: changes to allow enablement of neard.service on boot
profile: core: platform: add nfc connectivity RDEPENDS
agl-service-nfc: nfc: add neardal dependency
recipes-connectivity: neardal: add recipe
linux-yocto: kernel: backport pn533_usb fix from upstream
meta-agl-bsp: linux: add NFC configuration fragment
Bump low-can version
Fix cmake build with sdk inside a script
af-binder: Remove call to nice
Add network binding to core packagegroup
Add network binding recipe
Application Framework: Fix bugs
Fix folder name to use entry in BBFILE_COLLECTIONS
meta-app-framework/af-binder: bump to latest master revision for (version 5.99.FFRC2)
Fixing DCAN nodes addresses

linux-intel: nfc: backport pn533_usb stack fix
 libdbus-c++: Remove unnecessary bbappend
 Set CAN modules
 Enabling the DCAN2 interface
 kernel: enable 4A-specific config option snd-aloop
 Post rc1 bump of poky-agl.conf
 Prepare the Funky Flounder RC1 release
 agl-service-iio-devices: add RDEPENDS on libiio
 [GEN3 KF] Configure GPS device
 agl-service-iio-devices: add recipe for iio-devices
 af-binder: Upgrade to binding v3
 Add bluez5-obex to connectivity packagegroup
 Add bluetooth pbap binding to core packagegroup
 Add bluetooth pbap binding recipe
 Re-enable fix for cmake in sdk
 most: add backport patch
 most: update SRCREV
 Alias agl-image-ivi-crosssdk with agl-image-minimal-crosssdk
 [RCARGEN3] Update Renesas Rcar Gen3 BSP to 3.7
 kern-tools-native: fix fragments merging script
 agl-service-radio: Rework 4A support
 3rd part of the layer/profile rework [1/2]
 Fix kernel .config file configuration
 linux-linaro-qcom: delete bbappend of db820c
 dragonboard-410c: update 96boards-tools recipe
 Enable I2C-TINY-USB and LEDS-BLINKM drivers for AGL demonstrator
 Temporary fix for -nogfx target during layer reorg
 2nd part of the layer/profile rework [1/2]
 [RCARGEN3] Remove bluez PACKAGECONFIG feature
 agl-login-manager: Clean dependency
 Introduce meta-agl-profile-core and meta-agl-profile-graphics
 [RCAR] Update Rcar gen3 BSP to 3.6
 Remove trinity from packagegroup-ivi-common-test due to FTBS
 [Rcar] Remove valgrind recipes from meta-rcar
 gstreamer: add libv4l2 support
 dbus-cynara: Fix a missing RDEPENDS
 af-main: Refactor of user session management
 Rework how we pass arguments to QEMU, provide a wks.in file
 dbus-cynara: Avoid dependency loop
 Adapt repository priorities in preparation of the profiles
 Make better use of UUIDs on Intel platform wks files
 Add hci_uart ko cfg for rpi3 on board bluetooth
 Fix License collect for this recipe
 Remove upstreamed patch for typo in verify3
 weston-init: Ensure setting of the user
 Rename CAN low level service
 xmlsec1: Fix compilation issue in examples
 Add bluez-alsa recipes to AGL
 most: delete bbappend for removing skb_put_data patch
 50_bblayers.conf.inc: Add meta-updater-qemux86-64
 remove unused opencv folder
 si-tools: FM configuration improvements
 [AGL] ulcb: Disable build-in most driver

6.0.0

ti-bt: add a systemd unit and enable
Preserve HDMI naming for kingficher board
Update BBMASK for ulcb board
Add kingficher support
af-binder: Bug fix
wayland: weston-ini-conf: change virtual.cfg to 1080p and rotate 270 degrees
re-enable gobject-introspection
Fix image class for cyclone5 until fixed upstream
dra7xx-evm, beaglebone: Switch to sdimage-bootpart-uuid for wic
Add db-820c as community board
run-agl-postinsts, weston-init-conf: Switch LIC_FILES_CHKSUM syntax
Disable agl-ptest in snapshot build until dependency loop is fixed
Remove sota and sdl from default feature list
enabling kernel 4.14
Adding support for NVM Express partitions
af-binder: Upgrade
Hotfix for db410 on rocko
Fix cyclone5 build by supplying patched image class The class fails due to an old construct no longer supported in rocko.
Remove duplicate bbappend file in meta-agl-bsp/meta-ti
meta-intel: removal of ibt info since it has been defined in rocko.
Remove old boards for rocko
Fixes for meta-agl-bsp for rocko
lttng-modules: update to v2.10.5
Remove meta-rust from bblayers
linux-renesas: stop inheriting from 4.9
Move xmlsec1 folder in meta-app-framework
linux-renesas: remove bbappend
open-vm-tools: drop backport
linux-yocto: remove redundant patches from recipe
meta-agl-bsp: weston: flags of events must be kept
adding Minnow eth driver to allow network boot
Upgrade wayland-ivi-extension
core-boot-agl: add tzdata zoneinfo files
Update ulcb conf file
Remove unused gstreamer backport
[GEN3] add preferred version on omx package
run-(agl-)postinst: Emit progress to console
meta-security: Remove unused content
Upgrade wayland-ivi-extension
Revert "Fix kernel gcc7 issue"
remove backport commit
Revert "Fix CVE-2017-1000364 by backporting the patches for gen3"
Remove fix for optee-os
Remove gcc 6 fix
Update rcar gen3 kernel bbappend version
Update rcar gen3 driver
Remove porter machine
dbus-cynara: Upgrade to 1.10.20
xmlsec1: switch to meta-security version
systemd: earlier smack label switch
cynara: upgrade to 0.14.10
Remove smack recipe
Integrate parts of meta-intel-iot-security

Rename smack OVERRIDE to with-lsm-smack
 Fix gst omx version
 Fix kernel gcc7 issue
 Fix gcc7 issue
 Add gcc7 support for rcar gen3
 most: remove skb_put_data patch from SRC_URI
 linux-linaro-qcomlt: update to kernel 4.14
 dragonboard-410c: update 96boards-tools recipe
 dragonboard-410c: remove ACCEPT_EULA setting
 00_local.conf.agl.inc: Disable GObject Introspection Data
 linux-ti-staging: Remove linux-dtb.inc
 geoclue: Remove unnecessary dependency
 u-boot-ota: Fix build error with gcc7
 linux-firmware: Remove duplicated lines
 Change image type to wic.vmdk
 glibc: Arrange patch file
 netboot.bbclass: Remove image_types_uboot inheritance
 meta-agl-bsp/classes: Remove bbclass files
 rygel: Arrange rocko
 security-manager: Fix build error that causes gcc v7.0
 cynara: Fix build error that causes gcc v7.0
 libcap: Fix warning
 mesa: Arrange the recipe
 libmicrohttpd: Remove the recipe
 connman: Arrange patch file
 bluez5: Remove CVE patch
 systemd: Remove backporting patch
 freetype: Rename .bbappend to match new version from meta-openembedded
 pokg-agl.conf: Use gstreamer v1.2
 passwd.group: Add systemd-network and systemd-resolve
 linux-yocto: Rename .bbappend to match new version from meta-openembedded
 linux-yocto_4.4: Remove the bbappend
 wayland-fits: Remove the bbappend
 autogen-native: Remove the bbappend
 harfbuzz: Rename .bbappend to match new version from meta-openembedded
 bblayers.conf: Remove meta-ruby and meta-efl layer
 lightmediascanner: Add recipe
 agl-appfw-smack.inc: remove IMAGE_DEPENDS
 move GPLv2 logic into agl-gplv2 feature
 poky-agl: conf: change to gplv2 version of gdbm
 meta-agl-bsp/meta-rcar-gen3: Improve AUTOLOAD for kernel module.
 bsp: add salvator-x H3 support
 setup_mm_packages.sh: handle weird terminals
 Weston crushed by ivi-input-controller
 warning for microcode being ignored when present
 devtools: gdb: remove readline PACKAGECONFIG feature
 most: remove skb_put_data patch from SRC_URI
 linux-linaro-qcomlt: update to kernel 4.14
 dragonboard-410c: update 96boards-tools recipe
 dragonboard-410c: remove ACCEPT_EULA setting
 poky-agl: conf: make gplv3 versions of packages less preferred
 setup_mm_packages.sh: retab consistently
 setup_mm_packages.sh: remove BSP version mention

6.0.0

Provides default dev-mapping.conf file in images
00_local.conf.agl.inc: Disable GObject Introspection Data
linux-ti-staging: Remove linux-dtb.inc
geoclue: Remove unnecessary dependency
u-boot-ota: Fix build error with gcc7
linux-firmware: Remove duplicated lines
Change image type to wic.vmdk
glibc: Arrange patch file
netboot.bbclass: Remove image_types_uboot inheritance
meta-agl-bsp/classes: Remove bbclass files
rygel: Arrange rocko
security-manager: Fix build error that causes gcc v7.0
cynara: Fix build error that causes gcc v7.0
libcap: Fix warning
mesa: Arrange the recipe
libmicrohttpd: Remove the recipe
connman: Arrange patch file
bluez5: Remove CVE patch
systemd: Remove backporting patch
freetype: Rename .bbappend to match new version from meta-openembedded
pokg-agl.conf: Use gstreamer v1.2
passwd.group: Add systemd-network and systemd-resolve
linux-yocto: Rename .bbappend to match new version from meta-openembedded
linux-yocto_4.4: Remove the bbappend
wayland-fits: Remove the bbappend
autogen-native: Remove the bbappend
harfbuzz: Rename .bbappend to match new version from meta-openembedded
bblayers.conf: Remove meta-ruby and meta-efl layer
lightmediascanner: Add recipe
agl-appfw-smack.inc: remove IMAGE_DEPENDS
i.MX6: u-boot: Update patch for u-boot-script-boundary
Fix user-config.service is started everytime when app launching
af-binder: Add C++ feature to genskel
Change distro config post release
i.MX6: weston: Fix for missing flags
templates/machine: remove unused test dirs
Disable window decoration and ensure fullscreen
low-level-can-service: bump to new version
weston-ini-conf: Disable kingfisher's 2nd and 3rd output
adding copying of microcode.cpio if present
Adding lua to Host SDK
Adding mkabl to support MRB platforms (non signed kernel) and detection/rejection of configuration with initrd=microcode
Add SCHED_DEBUG and PROC_EVENT config fragment
Removing qtwebkit to be replaced by qtwebengine
af-main: Fix a meaningless link
Enabled general Intel bluetooth driver support instead of specific one. ibt-11-5 is the specific firmware for Joule. The image
A larger value is set as default-id-offset
meta-intel: Ensure we pass the microcode as initrd in wic images
ivi-controller: add resize setting suit to surface size
adding support for .wic .wic.xz as source for image
meta-intel: Switch to using WIC images only
lightmediascanner: add ~/Videos to initial media scan
4A: don't pull agl-audio-plugin when 4A is enabled

6.0.0

linux-renesas_%.bbappend: Fix ath9k_htc.cfg and rtl_sdr.cfg
af-binder: Make weak ws-client by default (to be fixed)
Fix wrong config.xml file used to build widget
XDG-IVI: Load by default id-agent in weston
af-binder: Fix hangup on long messages
Fix permission label and write verbs call
meta-agl-bsp: move usbaudio.cfg to linux-agl.inc
meta-netboot: enhance reference uboot config for R-Car Gen3
Fix Linux Kernel fragment for netboot
meta-agl-bsp/meta-rcar-gen3: Add default asound.state file
af-main: Handle users from the system scope
agl-users: Use UID for HOME directories and logins
demo-hmi: libqtappfw: switch to using a static SRCREV
Used fixed SRCREV for repos from src/
Remove unused homescreenappframeworkbinderagl recipe
Add gitreview file for flounder branch
Change libhomescreen-2017 to libhomescreen
Add agl-service-homescreen recipes without -2017
Delete unnecessary environment variable of mapviewer
Change POI application window size
Fix : guidance voice was not output
Fix errors in Phone application dependency
Revert "Use appid between homescreen-service and apps"
Revert "Update navigation and poiapp"
Adapt SRCREV of libhomescreen
Update navigation and poiapp
Update libhomescreen-2017
settings: switch to network binding dependency
Revert "Remove Deprecated recipes homescreen"
recipes-config: make unit be wanted by multi-user.target
web-runtime: Fix libEGL issue on R-Car
web-runtime: Set dimension to 1080x1488
Add missing dependency of qtlocation to navigation-demo
Update libhomescreen-2017
Remove Deprecated recipes homescreen
web-runtime: Use runxdg for running QtWebEngine
Make pulseaudio conditional for agl-demo-platform-crosssdk
Fix yocto virtual recipes parsing
agl-demo: add 4A as a dependency and a separate agl-demo-soundmanager
Remove porter board config
Unlock kernel build on dragonboard due to broken most recipe
Unlock kernel build on vayu due to broken most recipe
libqtappfw: add dependency on qtdeclarative
radio: remove useless dependency on pulseaudio
packagegroup-agl-demo-platform: re-activate MOST drivers on demo platform
Remove explicit pull of qtwebengine when agl-devel
Add qttaglextras to dashboard depends
Remove duplicate image
Change homescreen recipes to fit homescreen-2017
Revert "packagegroup: connectivity: add neard nfc tools package"
Revert "recipes-connectivity: neardal: add recipe"
Revert "packagegroup: connectivity: add neardal-tools package"
packagegroup: connectivity: add neardal-tools package

6.0.0

recipes-connectivity: neardal: add recipe
packagegroup: connectivity: add neard nfc tools package
Revert "Add the libsocketcan and canutils userspace components"
Add the libsocketcan and canutils userspace components
Disable the webruntime
mixer: use RPROVIDES instead of PROVIDES for virtual/mixer
Create a virtual/mixer for the AGL mixer
mixer app: bump to latest revision when 4A is enabled
Add libvcard to the AGL demo SDK
Add libvcard to libqtappfw depends
libvcard: add recipe
Add simple-id-agent for wayland-ivi-extension 2.0.2
phone: add service binding RDEPENDS
meta-agl-demo: remove Mocca application
3rd part of the layer/profile rework [2/2]
Bug Fix: POI app is not working
mediaplayer: remove qtmultimedia dependencies from recipe
packagegroup-agl-demo-platform: Fix Weston
2nd part of the layer/profile rework [2/2]
udisks: services: change default.target to multi-user.target
settings: add dependencies for libqtappfw support
udisks: automount.sh: mount disks with no partitions
agl-service-bluetooth: add missing DEPENDS and RDEPENDS dependencies
mediaplayer: update dependencies for recipe
lightmediascanner: add missing character sets to RDEPENDS
Rename CAN low level recipes.
recipes-kernel: most: add patch set for DT support
agl-server-gps: add missing libgps RDEPENDS dependency
mapview-demo: Switch LIC_FILES_CHKSUM syntax
Fix nativesdk-gn build
agl-demo: remove hardcoded meta-gplv2 layer
Remove the most drivers until updated for rocko
Remove weston virtual screen
Fix most for kernel 4.14
Fix qtwayland patch
Fix build of qtwayland 5.9 without evdev
Remove backport patch from Qt5 to show cover art
ninja,harfbuzz: Remove .bbappend
libdbus-c++:Fix build error in GCC-7
qtbases: Remove -no-use-gold-linker option
unicens-config: Add bash to rdeps
libdbus-c++: Remove bbappend file
opencv: Rename .bbappend to match new version from meta-openembedded
libqtappfw: use AGL_APP_REVISION for SRCREV
agl-service-weather: add weather service binding recipe
forgot to change the LICENCE url
files moved to root folder.
Add app DEPENDS for new HMI framework to als-meter-demo
agl-demo: bblayers: add meta-gplv2 layer
agl-service-mediascanner: fix RDEPENDS/DEPENDS in recipe
packagegroup: agl-demo: don't build qtwebengine unless agl-devel enabled
agl-demo: feature: remove agl-devel from included dependencies
ninja,harfbuzz: Remove .bbappend

6.0.0

libdbus-c++: Fix build error in GCC-7
qtbase: Remove -no-use-gold-linker option
unicens-config: Add bash to rdeps
libdbus-c++: Remove bbappend file
opencv: Rename .bbappend to match new version from meta-openembedded
Add lua to target dependencies in SDK
sources files had been moved to parent directory
hvac: Add missing dependency
Add QtAGLEExtras
POI App does not visible after startup
lightmediascanner: build mp4 plugin
Fix: Cannot running POI App
Enable Navigation API in navigation app
add recipes for identity, data persistence and nfc
libmp4v2: initial add 2.1.0
recipes-config: unicens-config: add service type oneshot
Adding lua to Host SDK
Bump signal-composer revision
recipes-demo-hmi: remove deprecated MostNetworkManager
recipes-demo-hmi: vod-server: use fix SRCREV
recipes-config: unicens-config: update configuration script
Remove qtwebkit from packagegroup-qt5-toolchain-target
Add libnfc recipes.
Convert most.bb to use KERNEL_MODULE_AUTOLOAD framework
Initial commit for POI App using Binder
Add signal composer recipe to demo platform target
Add D-Bus configuration of navigation service
Enable the AGL Navigation API library for C++
Fix BUG: meter map go to sea after navigation launch
Add jp,cn,tw fonts into agl-demo-platform
settings: add qtvirtualkeyboardplugin build dependency
Add a dependency on agl-service-navigation to the navigation recipe
Add initial support for AGL Navigation API
Replace qtwebkit by qtwebengine
weston-ini-conf: Fix test of DISTRO_FEATURE
navigation-demo: add navigation demo application recipe
navigation: change current application to a RPROVIDES to allow multiple options
weston-ini-conf: Add virtual display and record for CES2017 demo
mapviewer: Change layer id to 11001 to avoid conflict.
recipes-multimedia: add recipe for agl-service-unicens
recipes-platform: packagegroups: add agl-service-unicens to section MOST_HVAC_append
libhomescreen-2017: correct dbus permissions to allow statusbar access
Clean recipe for Dashboard
agl-login-manager: Use numbers for login users
recipes-config: unicens-config: fix driver configuration script
4A: delay service startup as a workaround to SPEC-1762/SPEC-1763 (temp workaround)
4a: Update 4a-hal-generic for bluetooth
4a: Add Bluetooth in 4a
bluez-alsa: added patch for null device
bump 4a-softmixer to the latest version
Add gitreview file for flounder branch
[4A] Bump 4a-hal-generic and 4a-softmixer (inc. MinnowMax fix)
Change libhomescreen-2017 to libhomescreen

6.0.0

Use libqthomescreen repository instead of qlibhomescreen
Use agl-service-homescreen without -2017
[4A/bluez-alsa]: use temporary solution pcm alsa-proxy
set LIBASOUND_THREAD_SAFE=0 for 4a
Update libwindowmanager
Update agl-service-windowmanager-2017
4a-mixer: Fix tap_shortcut case issue.
pulseaudio-module-4a: fix install files path to use the libdir variable
pulseaudio-module-4a: Update repository URL and revision
Revert "Use appid between homescreen-service and apps"
Update agl-service-windowmanager-2017
Bump packagegroup to fix library renaming issue
Use appid between homescreen-service and apps
Add bugfix in agl-service-windowmanager
Update to latest revisions for scalable rendering
4a-softmixer: bump revision (submodules update, less verbosity)
packagegroup-agl-audio: install pulseaudio-module-4a-client together with 4a
meta-audio-4a-framework: pulseaudio: fix the default.pa file
meta-audio-4a-framework: add recipe for pulseaudio-module-4a-client
Use homescreen repo instead of homescreen-2017
Update agl-service-windowmanager-2017
Update: change repository for soundmanager
Add a distro feature on pulseaudio for agl-audio-soundmanager
Change the repositories of window manager helper libraries
Update agl-service-windowmanager-2017
4a-mixer: remove useless dependency on pulseaudio
Fix yocto virtual recipes parsing
4a-softmixer: bump to latest version
Cleanup deprecated 4A configuration files
4a-hal-generic: bump revision (inc. first rev for RPI3 HAL)
Add python3-websockets for devel feature
meta-audio-4a-framework: add recipe for 4a-tools
4a: pin all revisions for repos in src/
Remove porter board feature
4A: disable pulseaudio alsa plugin
[for-RC2] Urgent - uprev agl-service-windowmanager SRCREV
homescreen-2017: remove useless ref to pulseaudio
bump 4a-softmixer to the latest version
4a-mixer: use PREFERRED_RPROVIDER for virtual/mixer
Fix 4a-mixer parsing error on nogfx build variant
Update: libwindowmanager
Update: Window Manager and window manager libraries
Fix bash on install script typo
4a-hal-generic: bump to latest master version
4a-hal-generic: MACHINE-specific HAL config files
4a-softmixer: bump to latest revision (APIv3)
Add launcher recipes and add into packagegroup
Revert "meta-audio-4a-framework: add INCLUDE_LEGACY_BINDING_VDYN to af-binder"
Update: libraries for window manager client
meta-audio-4a-framework: add INCLUDE_LEGACY_BINDING_VDYN to af-binder
alsa: add http mirror in the backported alsa recipes
meta-audio-4a-framework: bump 4a-softmixer and 4a-hal-generic to latest revs
meta-audio-4a-framework: backport alsa 1.1.6 from poky/master

6.0.0

Update: update agl-service-windowmanager-2017
meta-audio-4a-framework: align on eel with latest components revisions
weston: Add gst-recorder in weston 2.0.0
Add qlibhomescreen recipes and add it into packagegroup for SDK
First recipes for 4a-hal-generic and 4a-softmixer
homescreen-2017: change SRCREV to AGL_APP_REVISION
Add bluez-alsa to 4a-framework feature
Enable soundmanager to receive AudioManager signal
Update agl-service-windowmanager
runxdg: Switch LIC_FILES_CHKSUM syntax
homescreen: add agl-weather-service to HMI
agl-service-windowmanager: use fixed revision instead of AUTOREV
Add hmi-debug recipe
Update agl-service-windowmanager-2017 revision
Change the type of alias to runtime dependency
Fix default.pa for 4a
Update AGL HMI Framework to latest stable
Enable audio management with Sound Manager automatically
Delete HMI Framework individual correspondence
Remove event from asound config file
Fix: Navigation cannot play guide voice
Enable runxdg in CES2018 demo by default
setting Emergency and Warning to Pause lower priority streams
reduce the number of pulseaudio module alsa-sink
Add XDG Application Launcher on AGL HMI Framework
Update HomeScreen for CES 2018 demo
Integrate Tanikawa XDG Support
Change homescreen-2017 srcrev for shortcut icon
Add D-Bus configuration of navigation service
Update libwindowmanager SRCREV
templates: add PREFERRED_RPROVIDER for navigation
Add whitespaces
Added a new image: agl-image-telemetry.
4a-framework: recipes-multimedia: rm recipe for agl-service-unicens
Add gitreview file for flounder branch
blsched: user space big.LITTLE scheduler
Add gitreview file for flounder branch
Add gitreview file for flounder branch
Revert "[COMMUNITY] add kernel support for GMSL Camera board"

rcar-gen3: openavnu: Rename to follow upstream project name
rcar-gen3: kernel-module-avb: Update SRCREV to follow latest version
rcar-gen3: open-avb: Update SRCREV to follow latest version
rcar-gen3: avb-demoapps: Add dependency on cmake-native
rcar-gen3: avb-applications: Remove gptp_cfg_100mb.ini in install targets.
rcar-gen3: ADSP: Update ADSP new package names
rcar-gen3: DTV: Update to support M3N board
rcar-gen3: gstreamer1.0-plugins-bad: Fix build warnings
rcar-gen3: packagegroup-gstreamer1.0-plugins: Fix warning of LICENSE
rcar-gen3: gstreamer1.0-plugin-vspfilter: Add missing inherit pkgconfig
rcar-gen3: gstreamer: Upgrade gstreamer to v1.12.2
rcar-gen3: kernel-module-uvcs-drv: Update new package name
rcar-gen3: kernel-module-vspm: Fix issue of eSDK
rcar-gen3: kernel-module-vspm: Add deploy/licenses into cleaned dir
rcar-gen3: VSP: Update SRCREV for VSPM/V4L2
rcar-gen3: MMNGR: Update SRCREV to follow the latest version
rcar-gen3: GFX: Update GFX new package names
rcar-gen3: libgbm: Add udev to DEPENDS package
rcar-gen3: libdrm: Change to use v2.4.85
rcar-gen3: wayland-kms: Fix missing wayland-scanner dependency
rcar-gen3: weston: Remove weston-bin implementation
rcar-gen3: weston: Update to support weston 2.0
rcar-gen3: copyscript: Update MD5SUM for ICCOM packages
rcar-gen3: kernel-module-qos: Update SRCREV to follow latest version
rcar-gen3: IPL: Update IPL version according to BSP v3.6.0
rcar-gen3: u-boot: Upgrade version to v3.6.0 and adapt to rocko u-boot headers
rcar-gen3: linux-renesas: Fix M3ULCB hangs up when playing video
rcar-gen3: linux-renesas: Update to enable USB 3.0
rcar-gen3: linux-renesas: Update to support CAS feature
rcar-gen3: linux-renesas: Upgrade Linux BSP to v3.6.0
rcar-gen3: run-postinsts: WORKAROUND to fix dependency failed for serial getty
rcar-gen3: opkg: WORKAROUND to fix dependency failed for serial getty
rcar-gen3: dpkg: WORKAROUND to fix dependency failed for serial getty
rcar-gen3: systemd: WORKAROUND to fix timeout dev-ttySN.device
rcar-gen3: ccache: Update SRC_URI due to dead link
rcar-gen3: dtv-user-module: Remove redundant dependency
rcar-gen3: copyscript: Remove condition to check copying for DTV/DVD pkgs
rcar-gen3: conf: Add M3N into supported SOC_FAMILY in sample local.conf
rcar-gen3: kernel-module-vspm: Update SRCREV to follow latest version
rcar-gen3: kernel-module-vsp2driver: Update SRCREV to support M3N board
rcar-gen3: kernel-module-uvcs-drv: Update to support M3N board
rcar-gen3: kernel-module-mmngr: Update to support M3N board
rcar-gen3: gstreamer1.0-plugin-vspfilter: Update to support M3N board
rcar-gen3: wayland-kms: Update for supporting M3N board
rcar-gen3: libgbm: Update for supporting M3N board
rcar-gen3: GFX: Update to support M3N board
rcar-gen3: kernel-module-qos: Update SRCREV for QoS driver
rcar-gen3: linux-renesas: Update SRC_URI to support ICCOM module
rcar-gen3: IPL: Update SRCREV to follow the latest version
rcar-gen3: u-boot: Upgrade version according to Linux BSP to v3.5.9

6.0.0

rcar-gen3: linux-renesas: Upgrade Linux BSP to v3.5.9
rcar-gen3: README.linaro: Add information for M3N and M3ULCB
rcar-gen3: README: Add information for M3N
rcar-gen3: machine: Add support for M3N board
Update to new token
tests/health-test: remove always-fail
Test template for CAN interfaces
This needs to be reverted until the tests are in the qa-testdefinitions repo, otherwise LAVA jobs fail.
templates/base: set kernel_tree AGL-yocto
utils/agljobtemplate: fixup image_type, branch and version
Test template for CAN interfaces
templates/boot: generic-base-boot: fix boot with NBD
fix rpi3 console device
templates/machines: porter: add device_arch and device_mach
templates/config: use HTTP URLs for downloads
Removed unused Health-test
Unify rfs_image use for m3ulcb
templates/callback: switch default to AGL backend
templates/callback: use new HTTPS URL for AGL backend
templates/machines: use crosssdk images for daily/release builds
templates/machines: rpi3: switch to upstream device-type
templates/config: update release defaults to eel
templates/machines: raspberrypi3: use right device-type
templates/callback: baylibre: default to BayLibre backend
templates/callback: agl: update backend URLs
templates/callback: update BayLibre URL
templates/machines: m3ulcb: use crosssdk image for release
templates/machines: qemu: disable systemd log colors
templates: fix the rootfs name for qemu release builds
job-prereq: Fix the tool after build changes
templates: fix the rootfs name for m3ulcb and rpi3 daily builds
utils: define test-plans based on build-type
utils: change the url / build behavior scheme
added service dependency to Bluetooth-Manager
Add gitreview file for flounder branch
Added .vscode to .gitignore
Do not list audio roles not bound to a device
Lower verbosity
Added role for radio, and mute/unmute actions
Fixed compilation warnings with latest jsonc
No longer sets the API version in code
Use latest version of conf.d/app-templates submodule.
Use latest version of controller submodule.
Use latest version of afb-utilities submodule.
Fix search path for config file
Add ignore for NetBeans projects files
Fix build for migration to the binder from master
ahl-binding: enable AFB_BINDING_WANT_DYNAPI symbol to be compatible with legacy dynapi calls
Fix a bug that duplicate the roles array
Add special permission to the mixer
CONTROL_CONFIG_PATH: add widget install path on target
Fix bad service name
Fix issue that prevent config file deployment

6.0.0

Update to last softmixer and hal, plus some fixes

Add some policy emulation

Rewrite of the High Level API using the new HAL model

SPEC-1207 Several improvement on AHL error messages, this required a lot of changes in the code, please review carefully

SPEC-1207 Improve error messages for unable to find endpoint

SPEC-1207 alh-4a error message add streamID information to unsubscribe error.

Provide JSON request when ctl-set FAIL SPEC-1183

conf.d: add permission for UNICENS

Fix 4a ahl when using unicens service

binding: bluetooth: add adapter parameter to JSON output

Add gitreview file for flounder branch

binding: bluetooth: provide complete BlueZ object path

binding: bluetooth: agent: request for binding to be default agent

binding: bluetooth: remove obsolete oFono code

binding: bluetooth: remove useless binding-bluetooth.pro file

Remove reference to <afb/afb-service-itf.h>

binding: bluetooth: discovery_result response refactored

vimrc: add project startup file for vim

binding: bluetooth: clean up array of struct afb_verb_v2

binding: bluetooth: set bluetooth HMI icon on startup

Add gitreview file for flounder branch

moved files to root folder.

ll-database-binding: allow binding to build with older gdbm libraries

fix json key to string conversion.

add debugging html ui.

move submodule to corresponding master version

Fix entry point

Add gitreview file for flounder branch

binding: geoclue: upgrade to binding framework v3

binding: geoclue: allow weather binding to get early location

binding: geoclue: enable service on system startup

binding: geoclue: add binding documentation

Add gitreview file for flounder branch

binding: geofence: upgrade to binder framework v3

binding: geofence: add binding documentation

Add gitreview file for flounder branch

binding: gps: upgrade binder framework to v3

binding: gps: update app-templates to current revision

binding: gps: add binding documentation

Add gitreview file for flounder branch

Update latest code from agl-service-homescreen-2017

Change gitreview to new location

Revert "Use appid between homescreen-service and apps"

Use appid between homescreen-service and apps

Add gitreview file for flounder branch

Change homescreen-service from c project to c++ project

Revert "Use appid between homescreen-service and apps"

Use appid between homescreen-service and apps

Add gitreview file for flounder branch

update submodule to eel version

removed unused files and useless subdirectories

improve the debug tools

added missing .gitreview

6.0.0

changed an error into a warning
Add gitreview file for flounder branch
Mediaplayer now works on 4a roles
afm-mediaplayer-binding.c: Fix coding style
binding: mediaplayer: fix race condition with initial album art
binding: mediaplayer: fix duplicate entries being added to playlist
binding: mediaplayer: add image metadata to event
binding: mediaplayer: give initial playlist to new subscribers
binding: mediaplayer: add loop control to documentation
binding: mediaplayer: add check GST_TAG_PREVIEW_IMAGE for album art
binding: mediaplayer: only get audio results
binding: mediaplayer: add binding documentation
Add 4A support
Add gitreview file for flounder branch
binding: mediascanner: fix race condition with dbus and lightmediascanner
vimrc: add project startup file for vim
binding: mediascanner: optimize audio sql query
binding: mediascanner: add binding documentation
binding: mediaplayer: tag media type in playlist
binding: mediascanner: fix media_result for video
binding: mediascanner: add video scan from lightmediascanner
Add gitreview file for flounder branch
binding: nfc: workaround service exiting if no adapters
binding: nfc: remove current_uid from globals declarations
binding: nfc: add neardal support for reading NDEF encoded tags
binding: nfc: use cached json_object for events
binding: nfc: convert binding to afb version 3
binding: nfc: move libnfc checks from thread
binding: nfc: split out common functions
binding: nfc: new initial binding
Add gitreview file for flounder branch
cmake: added missing dependency to libusb-1.0
.gitignore: added build*
added an html5 page for testing
fixed the support for 4a framework
added api verb for RDS information
Set the binding version in cmake instead of source
radio_impl_rtldsr: use macros for hardcoded sizes
Fixed compilation warnings
Use latest version of conf.d/app-templates submodule.
Rework output to directly support 4A
Split rtldsr code into standalone helper
Always enable Kingfisher support
Remove reference to <afb/afb-service-itf.h>
binding: update kingfisher i2c bus number
Add Kingfisher Si4689 support
binding: radio: add binding documentation
binding: agl-service-radio: remove qmake artifacts
Add gitreview file for flounder branch
afb-test.sh: launch 2 binders for test
Missing API_NAME for the test widget
Fix: segfault at object addition
Bump submodules

Setup the project for afb-test framework
Typos, cleaning.
Fix: segfault after adding new objects
Returns error in request response
Fix: wrong default getSignals action defined.
Improved performance
Adds a signal's metadata attribute
Fix the build for master with latest binder
Update submodules
Reintroduce the old builtin plugin
Fix: release json_object
Remove useless variable setting
Rework loading sources and signals.
Move "action" load to controller
Return separately last timestamp and value
Change, clean plugins.
Change when to notify
Use Nanosecond precision by default
Use a better parameter name, more explicit
Implement the signal's update default method
Fix wrong initialization
Rename afb-utilities to afb-helpers
Improve signal handling
Initialize sources at binding start.
Use signal subscription args if present
Make 2 set of configurations
Added .gitreview file
Add objects directly from JSON argument
Add objects directly from JSON argument
Linting, wrong variable type used.
Add undefined value possibility in signal values
Renaming data directory to var in app-templates
Linting improvements.
Update documentation
Update documentation metadata
Using AppFw CPP capabilities
Fix some memory leak using LUA
Don't segfault at exit pointed to freed objects
Don't use afb-genskel until C++ is handled
Update closing message
Remove embedded LUA 3rdparty
Bulk of small fixes
Add gitreview file for flounder branch
Change .gitreview
Fix memory leak
Fix json format error
Add High Level APIs
Get first sinkID and set it as default on initialize
Clean: divide soundmanager.c into interface part and proxy part
Fix: remove the warnings of copy from const
Rename the package name
Add .gitignore
Improve: Add stream_open API

Clean: clean up duplicate code
 Clean: divide the source files
 Remove the optional definition of debug
 Add getListMainSources function
 Change define name
 Add high level API functions
 Fix typo
 Remove unnecessary file
 Remove trailing spaces
 Enable to set "interrupt" value in registerSource
 Enable getListMainSinks function
 Change static variables to use #define
 Update ApplicationGuide document
 Add gitreview file for flounder branch
 Fix memory leak
 Fix json format error
 Add High Level APIs
 Get first sinkID and set it as default on initialize
 Clean: divide soundmanager.c into interface part and proxy part
 Fix: remove the warnings of copy from const
 Rename the package name
 Add .gitignore
 Improve: Add stream_open API
 Clean: clean up duplicate code
 Clean: divide the source files
 Remove the optional definition of debug
 Add getListMainSources function
 Change define name
 Add high level API functions
 Fix typo
 Remove unnecessary file
 Remove trailing spaces
 Enable to set "interrupt" value in registerSource
 Enable getListMainSinks function
 Change static variables to use #define
 Update ApplicationGuide document
 Add gitreview file for flounder branch
 Add gitreview file for flounder branch
 agl-service-unicens: update submodule afb-helpers
 agl-service-unicens: move definition of api v2
 agl-service-unicens: update app-templates
 ucs_cfg.h: increase tx/rx message buffer to 1052
 agl-service-unicens: support fiberdyne amp setup
 agl-service-unicens: robustness measure for tx msg
 agl-service-unicens: replace legacy sendmessage
 agl-service-unicens: support base64 Tx/Rx
 agl-service-unicens: prepare control message transmission in b64 format
 agl-service-unicens: update submodules, app-templates
 agl-service-unicens: Rx message event
 ucs2-interface: Fix trailing whitespaces
 ucs_binding.c: Fix compiler warnings
 ucs_binding.c: Add control message transmission
 conf.d: project: modify cmake configuration

conf.d: wgt: set widget parameters
Add gitreview file for flounder branch
vimrc: add project startup file for vim
binding: wifi: clean up array of struct afb_verb_v2
binding: wifi: fix logic check and reduce error messages
binding: wifi: set initial Wi-Fi HMI state
binding: wifi: disable WiFi HMI status icon
Add gitreview file for flounder branch
Change .gitreview
Add policy table generated by ZIPC for EXAMPLE
Add PolicyManager as plugin
Enable scaling to fit various screen resolutions
Forbid negative value for area size
Rename event names to lower camel case
Rename APIs
Add new layers and rename existing layers
Add configuration file for each area sizes
Convert the roles from old one to new
Add signal when the displayed application changed
Clean: sort source code according to the order of header file
Fix class name "App" to "WindowManager"
Refactor: Integrate rework handles by application
Rework: Window Manager handles by application
Add Get/Set area size functions
Bug Fix: Window Manager doesn't react after killing app process
Clean: remove small files
Clean: remove useless headers
Fix Client Context of afb-binder
Remove the unnecessary property
Format source codes
Update document
Change reply timing
Send visible event after commit change
Enable fallback, then display applications
Add APIs which can get information about the display and the surface area
Change the protocol from ivi-controller to ivi-wm
Fix screen flicker
Enable an application re-launch
Fix build error in gcc 7.2
Enable to show Video and WebBrowser
Clean up source code
Remove automatic code generation
Exclude execution bit
Add background layer for CES DEMO
Support XDG application
Revert "Add APIs which can get information of display and area"
Add APIs which can get information of display and area
Add gitreview file for flounder branch
Fix Window Manager crush when application terminated
Readd policy table generated by ZIPC for EXAMPLE
Readd Policy Manager as plugin
Fix multiple erase of surface information
Fix mistake

6.0.0

Fix WM attach layers to different screen.
Improve output of multiple screen resolution
Revert "Enable scaling to fit various screen resolutions"
Fix source rectangle changes every state change
Fix crashed application can re-launch
Fix memory release problem
Fix the race condition of HomeScreen
Remove useless functions
Fix XDG application shrinks
Fix timer
Revert "Add PolicyManager as plugin"
Revert "Add policy table generated by ZIPC for EXAMPLE"
Add policy table generated by ZIPC for EXAMPLE
Add PolicyManager as plugin
Enable scaling to fit various screen resolutions
Forbid negative value for area size
Rename event names to lower camel case
Rename APIs
Add new layers and rename existing layers
Add configuration file for each area sizes
Convert the roles from old one to new
Add signal when the displayed application changed
Clean: sort source code according to the order of header file
Fix class name "App" to "WindowManager"
Refactor: Integrate rework handles by application
Rework: Window Manager handles by application
Add Get/Set area size functions
Bug Fix: Window Manager doesn't react after killing app process
Clean: remove small files
Clean: remove useless headers
Fix Client Context of afb-binder
Remove the unnecessary property
Format source codes
Update document
Change reply timing
Send visible event after commit change
Enable fallback, then display applications
Add APIs which can get information about the display and the surface area
Change the protocol from ivi-controller to ivi-wm
Fix screen flicker
Enable an application re-launch
Fix build error in gcc 7.2
Enable to show Video and WebBrowser
Clean up source code
Remove automatic code generation
Exclude execution bit
Add background layer for CES DEMO
Support XDG application
Revert "Add APIs which can get information of display and area"
Add APIs which can get information of display and area
Add gitreview file for flounder branch
Fix app name to match up with name in config.xml
Add gitreview file for flounder branch

wrap-json: Fix duplicated lines in header file
 Add '@' as binder middle name separator.
 Enhance 'wrap_json_clone_depth' description
 Fix: use of GetBindingDirPath without dynapi
 Retrieve directory list from environment variables
 Remove the file .gitmodules
 Remove unnecessary 'AFB_DEBUG' redefinition
 Use binding version to handle dynapi
 At search, use the prefix parameter as a prefix
 Remove deprecated use of cmake/Qt macro
 Rename method to avoid conflict with Qt's one
 Fix warnings due to json-c evolution
 wrap-json: new helper functions for comparison
 Removed anonymous function in ScanDir and fixed warnings
 wrap-json: Add clone facility
 Disabled debug code (only used for testing).
 Correction to include dynamic api correctly
 Fixed build warnings with gcc >= 7.3
 Added afb-helpers-utils.h
 Fixed compilation warnings with gcc-7.2.0
 Fixed spelling
 More secure way to use strncat and strncpy
 Fix: compile errors depending API version
 wrap-json: Fix warnings
 wrap-json: Update the documentation
 wrap-json: Accept null as valid base64
 wrap-json: Record result of tests
 wrap-json: Fix bug decoding empty base64
 wrap-json: Improve base64 en-de-coding
 Fix: wrong searchPath parameter
 Documentate, formating, linting.
 Adapt function to dynamic API
 Formating
 Make CURL Wrapping functions optional
 Add new function to retrieve HTTP response code
 POST using unescaped arguments
 Added a Qt's websocket client to AFB into helpers
 Fix GCC < v7 warning on maybe unitialized variable
 wrap-json: Add base64 byte buffer support
 Rename cmake target accordingly to the git repo
 Adds a CURL wrapper library to help using libcurl
 Linting/Fix: remove warning int/size_t conversion
 Fix memory leak
 Avoid memory collision.
 Add gitreview file for flounder branch
 Change loading configuration object behavior
 app-controller-submodule doc: Changed doc to fit new format.
 Fix: compatibility with binder FF.RC4
 Fix: Wrong variable definition
 ctl-lua: Fixed memory corruption
 Migration to v3
 Adds v3 function to get binding settings
 New function returning the binding root directory

Change the default GLOB pattern
 Fix wrong computed length
 Add path to the installed widget path.
 Controller: Converted README to a gitbook version.
 New defaults useful functions on lua table
 More precise log message when loading a Lua file
 Fix: wrong legacy function signature
 Split loading JSON controller file.
 Release arguments once C function returned.
 Fix : typo introduced in a previous commit.
 Fixed character counting that was shortening paths
 Keep json unmodified during action execution
 Use prefix variable to find controller's plugins
 Use binding version to set controller definitions
 ctl-lua: typo fix
 asynchronism for test: LockWait added
 Fix: plugin api assignement order
 Execute ConfigExec only if section is existing
 Always set the api member even if NULL.
 Ability to add a plugin after the initial load
 Be able to dispatch required api at the wanted time
 Change LUA package path at LUA interpreter load
 Don't load two times a plugin even for LUA
 Fixed hidden bound variable (apiHandle)
 Fixed null value when push Lua arguments
 Adjust to compile with incoming bindings v3
 Remove declaration to not existing functions
 Add 2 lua utilities function
 Update README.md for new metadata keys.
 Fix a compilation issue due to modif of AFB_ReqSuccess
 README.md: update README accordingly to new json scheme.
 Fixed crash due to call to json_object_put
 Fix segfault when printing long message from lua
 Fixed spelling of AFB_ReqSuccess
 Remove an unnecessary variable
 Make parsing of action loading non blocking
 Use an external file for app fw functions link
 Use macro to test request validity
 Fixed build warnings with gcc >= 7.3
 Increase lua script max message size
 Prevent lost of config file path when searching
 Correct way that api actions are handled in controller
 Handle more metadata in the controller.
 Add possibility to set prefix to NULL in CtlConfigScan
 Fixed compilation warnings with gcc-7.2.0
 Add an external field to CtlConfigT
 Make action item from a LUA action mandatory
 Handle no prefix given
 Good usage of strncat and strncpy
 Update to the new JSON syntax
 Detect failure at OnLoad action calls
 Improve reliability and function calls
 Correctly release request JSON object

Add AFB macros
Don't use assert in controller.
Change lua2c JSON syntax.
Search for Event section
Fix: changes key name.
Fix: arguments pointer NULL check
Fix wrong error message.
Simplify action definition
Fix: Dyn API Action loading procedure
Use new version of function GetBindingDirPath
Format
Loads I2c functions per plugin.
Improve json object release
Improve way to loading an action
Upgrade config schema
Fix: callback execution condition
Fix conversion compilation warning
Fix link to afb-helpers renamed from afb-utilities
Release json_objects used to launched the action
Format, get rid of conversion type warning.
Use an intermediary variable avoiding side effects.
Old audio controller traces left behind
Fixed links and markdown warnings in README.md
Linting: Initialize fullprefix variable
Fix memory leak
Change prefix generation, simpler is better
Add binding rootdir to searched path for conf and plugins
Make public ConfigSearch function
Fix segfault when no I2c functions defined
Get back on track I2c functions.
Fix warning compile about uninitialized variable
Avoid compile warning, memory leaks, linting
Fix wrong json object pointed.
Protect exec when no files found.
wrong json unpacking fails.
Wrong increment always fails load an action
Loading additional files from JSON section
Remove C++ warning ISO/C++11
Get back lua2c functions parsed at plugin load
common.cmake: fixed erroneous search path for os-release
Fix: missing gcov symbol in compiled binaries
Add gitreview file for flounder branch
app-templates doc: Changed doc to fit new format.
Update Docs
Fix: typo
Rollback about TEST build type
Adding a TEST build type
Change default compilation options.
Test widget only if there are test materials
Handles more test LABELS.
Missing flag for COVERAGE build type
Create a test widget
Fix: interpreted '&' character

6.0.0

More accurate comment about widget template file.
Align sample on actual default compile options
Add support to binding version 3.
Warning if not using wgtpkg-pack to make a widget
Rework CMAKE_INSTALL_PREFIX and INSTALL_PREFIX var
Be able to overwrite BUILD_TYPE using CLI
Use CACHE variable for other common CMAKE variable
Fix:: wrong wgt using RELEASE BUILD TYPE
Fix: SYSROOT location detection... Wrong test.
Change the default debug compilation options.
Clearer coverage compilation options configuration
Don't overwrite the autobuild script if it exists
Disable the in-tree build method.
Detect Yocto as OS distribution
Fix: wrong compile options added
Fallback using zip format if no wgtpkg-pack found
02-variables.cmake: Avoid checking CXX version if not required
config.cmake.sample: Remove dependency to libsystemd
config.cmake.sample: Remove dependency to libmicrohttpd
Added -D_FORTIFY_SOURCE=2 to CFLAGS
start-on-target: uses RSYNC_PREFIX path for config
Fixed spelling.
Improve OS detection
Fix: OS detection
Launch from workdir
Change closing that could fix native debugging
Fix filename pattern to match .cmake files
Adding cmake file at the root directory
Adds commit hash to the version.
Change default sample settings.
Forgot updating README also...
Update documentation
Use LFSH named, rename data to var
Use new CPP generation from afb-genskel
Update README with latest docs modifications
Doesn't set rpath for built target and update doc
Details external library.
Add gitreview file for flounder branch
Add gitreview file for flounder branch
Add gitreview file for flounder branch
Improve output of multiple screen resolution
Use old role Dashboard for temporary solution
Modify Dashboard to use qtaglextras
Use low-can api to display vehicle speed and engine speed
Add .gitignore to ignore build folder
Fix build with libhomescreen and qlibwindowmanager with bitbake
Update to new color scheme
Remove setting Qt Quick Control 2 style
Check if dependencies are available and make it run without them
Fix path to Qt5Tool:release for native
I18N: add basic functionality and a few translations
Add gitreview file for flounder branch
Revert "Use appid between homescreen-service and apps"

6.0.0

Replace top and bottom area's background image
Use appid between homescreen-service and apps
Merge latest commit from homescreen-2017
Change bluetooth status using agl-service-bluetooth
Merge homescreen-2017 modification to homescreen.
Copy source code from homescreen-2017
Add gitreview file for flounder branch
Revert "Use appid between homescreen-service and apps"
Use appid between homescreen-service and apps
Improve output of multiple screen resolution
Setting up a JSON configuration file to change LED paths without recompiling
Changing LED colour gradient according to temperature sliders
Languages changing depending on identity logged in
Add basic translation support
Desktop PC development support
Apply QtQuickControls2 style from platform
Update to new color scheme
Add gitreview file for flounder branch
Revert "Use appid between homescreen-service and apps"
Use appid between homescreen-service and apps
Improve output of multiple screen resolution
mediaplayer: qml: switch to libqtappfw Qt model generation
mediaplayer: fix race condition with local media and bluetooth a2dp
mediaplayer: workaround race condition with agl-service-mediaplayer service
mediaplayer: qml: pause agl-service-mediaplayer on A2DP stream
mediaplayer: qml: remove QtMultimedia
mediaplayer: qml: fix clear() being called on wrong object
libqtappfw: bluetooth: switch from qml websockets to libqtappfw
libqtappfw: mediaplayer: switch from qml websockets to libqtappfw
mediaplayer: bluetooth: update discovery_result response to new format
Update to new color scheme
mediaplayer: qml: fix issue with bluetooth icon
Add gitreview file for flounder branch
App's name is in lowercase on TapShortcut event
Revert "Use appid between homescreen-service and apps"
Use appid between homescreen-service and apps
Improve output of multiple screen resolution
Fix issue with QML variable declaration
Fix compilation and deployment
Make volume sliders works correctly
WIP better handling for slider creation
Better Qt5 handling
Allow to build and run on native linux host
Fix bad autocompletion
Use latest version of conf.d/app-templates submodule.
Use latest version of afb-helpers submodule.
Fix build failure on master due to afb-helpers
Merge 'eel' into 'master'
mixer: add clearer pulseaudio control naming
Add gitreview
navigation: geofence: add basic geofence service support
navigation: remove artifacts from build tree
Add gitreview file for flounder branch

6.0.0

Revert "Use appid between homescreen-service and apps"
Use appid between homescreen-service and apps
Improve output of multiple screen resolution
Remove all static contacts model support
Use PBAP data backed ContactsModel
Refresh the recent call list at the end of each call
Remove all static call history model support
Add support for PBAP RecentCallModel
Add PBAP contact name lookup for incoming and outgoing calls
phone: add tabbed view
phone: add discrete call function parameters
contacts: handle multiple numbers and types
Remove reference to <afb/afb-service-itf.h>
telephony binding: support runtime change of BT HFP modem
telephony-binding: add ofono manager calls to support async init
telephony-binding: remove empty pre-init function
app: remove unneeded console message from HMI init boilerplate
app: update application name to be more concise
Fix unused variable warning from HMI init
Fix build error in gcc 7.2
Fix icons of Button 7
Update to new color scheme
Add gitreview file for flounder branch
Revert "Use appid between homescreen-service and apps"
Use appid between homescreen-service and apps
Improve output of multiple screen resolution
Update to new color scheme
Add gitreview file for flounder branch
Revert "Use appid between homescreen-service and apps"
Use appid between homescreen-service and apps
Improve output of multiple screen resolution
wifi: convert to libqtappfw network model
settings: bluetooth: qml: stop device lists from scrolling
settings: bluetooth: qml: stop duplicate entries in lists
settings: bluetooth: switch from qml websockets to libqtappfw
settings: wifi: remove unused http address from Wifi QML
settings: remove build artifacts
Improve version information for AGL UCB.
Update to new color scheme
Revert "settings: switch keyboard to qtvirtualkeyboardplugin"
settings: switch keyboard to qtvirtualkeyboardplugin
Add gitreview file for flounder branch
Add gitreview file for flounder branch
Add gitreview file for flounder branch
Add demo video player app for CES2018
Add gitreview file for flounder branch
Use application framework binding v3
Use some app-fwk macros to support v2 and v3
Use app-fwk macro to get verbosity level
Correct warning that was raised at compilation
Set afb version in cmake instead of in header
Update version of conf.d/app-templates submodule.
Fixed crash when 'set' request is based on numids

6.0.0

Add an option to 'ctlget' verb
Add an option to 'infoget' verb
Update dB basic TLV
Correct a segfault when using ping verb
alsa-hook: Update to future version of app-framework-binder
Update to binder changes for bindings v3
Improve resource liberation
Fix undeclared event crash on 4A
Change websocket session id from uid only to pcm+uid
Change initial volume to be in % in place of absolute values
Add gitreview file for flounder branch
hal_most_unicens.c: Fix Master_Ramp init value
Keep submodules on the same branch as project
hal_most_unicens.c: Set amp volumes initially
Update hal-utilities
using alsa card name which remain stable over reboot
4a-hal-unicens: add missing audio roles for 4a
MOST_UNICENS: hal_most_unicens.c: Remove superfluous initialization code
submodule: update submodules and fix CMakeLists.txt
Add gitreview file for flounder branch
afb-session: Fix an issue in managing sessions
Version 6.0.0 aka "Funky Flounder"
Add gitreview file for flounder branch
afb-apiset: fixed the error message upon api open.
afb-session: Use ad-hoc pseudo-random uuid
VERSION 5.99.FFRC6
main-afb-daemon: Export API after initialization
app-framework-binder doc: Changed doc to fit new format.
Allow choice to trap or not program faults
main-afb-daemon: Set AFB_ROOTDIR and AFB_WORKDIR in environment
afb-hook-flags: Fix a compilation warning
jobs: Abort when systemd's event loop lost
afb-stub-ws: Add reconnection of ws-clients on need
afb-stub-ws: Safe handling of disconnections
afb-stub-ws: Process error on call to remote
Send error replies on disconnection
afb-wsj1: Split 'wsj1_on_text' in 2
afb-stub-ws: Clean up
afb-api-ws: Use afb-socket features
afb-socket: Improvement
afb-stub-ws: Improve naming
hello3: Add mutebug
Set version to 5.99.FFRC4
Provide functions afb_service_call[_sync]_legacy
afb-export: Provide the real path of the binding
Fix warnings and false errors
afb-export: Manage path of libraries
Add ability to provide binding settings
Improve parsing of json string
afb-socket: Separate socket creation
tic-tac-toe: improve event handling
afb-msg-json: remove obsolete function
afs-supervisor: Improve comments

coverage: Improve coverage test
afb-export: Set API context as validated
main-afb-client-demo: Exit with a significant code
Tune dependency to fdev-epoll
afb-api-v3: Simplify the code
fdev: Simplify the code
coverage: Add inet's API test case
Fix some more memory leaks
afb-config: Rewrite the config as JSON object
Fix tiny documentation bug
main-afb-daemon: Reorder instantiation of API
json-c: Remove escaping of slashes
coverage and test: Add tests
afb-api: Define the function `afb_api_is_public`
Tiny documentation fixes
afb-export: Fix event handler of API
afb-config: Simplify version print
afb-trace: Fix bug on uuid of session's events
afb-trace: Fix bug in session handling
Fix errors in migration to V3
Set version to 5.99.FFRC3
afb-binding: Add missing declarations
Simplify starting of services
afb-trace: Fix compiling error on old json-c
afb-hook & afb-trace: Fix usage of readlink
afb-binding: Fix export of "class" handling
afb-wsj1: Fix json parsing of unterminated
afb-api-v3: Fix wrong error message
afb-apiset: Try to initialize all APIs
afb-export: Monitor calls to API initialisation
afb-api-so-v2: Monitor the preinit to catch SEGV
main-afb-daemon: Kill child instead of it
afb-config: Fix wrong error message and more info
afb-supervision: Remove dependency to external
Packaging: Fix RPM build
main-afb-daemon: Remove call to "nice"
docs: Fix internal links by referencing html files
coverage: Improve testing
hello2: Add a binding v2 example
hello3: Fix a bug
afb-api-v3: Fix a bug introduced by 8ca7b69
afb-cred: Fix memory leak
coverage: Add valgrind diagnostics
Update version to 5.99.FFRC2
Simplify build by introducing queuing function
Remove uses of deprecated macros
supervision: Exclude conditionaly the supervision
Simplify build process
locale-root: fixed uninitialized variable
afb-trace: Fix bug in tracing of `afb_req_get_client_info`
afb-client-demo: Fix bug that forbids interactive behaviour
afb-req: Fix a bug in `afb_req_verbose`
saha -> salam: To continue using hello

doc: Tiny improvement
Improve readdirs to follow symbolic links
coverage: Add the missing files
coverage: Add coverage test
main-afb-client-demo: Allow scripting
afb-autoset: Automatic prefix with unix:
afb-api-v3: Refactor verb description
afb-api-so: accept symbolic links for bindings
hello3: Add verbs
api-v3: Add monitoring of faults in preinit functions
afb-client-demo: Add option to keep running
Improve documentation of api v3
packaging: Add V3 demo files
packaging: Update spec and deb packaging
Fix a warning in using readlink
Fix warnings due to json-c evolution
afb-hsrv: Add processing of type application/json
api-v3: First draft
jobs: Switch back to sd_event
afb-trace: Restore microsecond time
gitignore: Ignore netbean files from nbproject/
Fixed spelling
afb-client-demo: real raw output when --raw is set
afb-client-demo: improved usage message
netbean: update netbean config
afb-client-demo: Add option -e/--echo
wrap-json: Update and fixes for y/Y
afb-hook: Factorize call to pattern matching
afb-apiset: manage deletion of apis
afb-hook: Refactor timestamps of hooks and trace
jobs: Fix minor errors
.gitignore: Ignore KDevelop files
wrap-json: Sync with app-afb-helpers-submodule
wrap-json: Add base64 byte buffer support
afb-eventid: Fix comments
afs-supervisor: Add ws-server option
jobs: Switch to fdev_epoll instead of sd_event
fdev: Improve fdev handling with epoll
jobs: Cosmetic changes
afb-hsrv: remove dependency to systemd
Make DBUS transparency optional (off by default)
afb-hswitch: Improve HTTP scanning of API/VERB
afs-supervisor: Fix typo
Convert pc.in from UTF-8 to US-ASCII
CMakeLists: Fix c++ build
fdev: Improve readability
afb-websock: Fix a double free
afb-websock: Fix double close
Update date of copyright notices
afs-supervisor: Enforce session check (for token)
afs-supervisor: Force reply
afb-supervision: Fix typo
afs-supervisor: Fix supervisor deafness

6.0.0

afs-supervisor: Add systemd service and config
afs-supervisor: Remove dependency to systemd
supervisor: Make it a HTTP server
afb-session: Fix bugs
afb-stub-ws: cosmetic improvements
afb-config: Add traceses for tracing sessions
memo-supervisor: added a memo for supervisor
afb-supervision: Fix error on 'trace'
xreq: export a function to get req
fdev: Introduce fdev for file event handling
afb-systemd: Integrate sd-fds features
afb-systemd: Isolate systemd main entries
Bump version to 5.99-FFRC0
afb-monitor: Add session and rework permissions
afb-session: Verbs for timeout and remining time
afb-context: Early token change
afb-config: Fully exclude config monitoring
afb-config: Increase the default timeout of sessions
afb-session: Use clock insensitive to time changes
afs-supervisor: Add verb for running discovery
afs-supervisor: Add discovery mechanic
afs-supervisor: Improve name of supervisor api
supervision: Add retrieval of config
afb-config: export config to json
supervision: Add supervision and supervisor
afb-stub-ws: Fix segfault on diconnection
afb-stub-ws: Protect against self-destruction
afb-trace: Add tracing of sessions
afb-session: Add function to enumerate sessions
test-session: Add check of hooking
afb-session: Insert call to hooking
afb-hook: Add hooks for session
afb-session: Refactor and test unit
afb-stub-ws: Fix a session leak bug
afb-config: Improve doc of option --token
main: Isolate HTTP initialization
afb-session: Return an initialization status
afb-session: Fix a typo
jobs: Add argument to start
afb-xreq: Export afb_request facilities
afb-trace: Replace daemon by api name
afb-evt: Add event creation with prefix
afb-api: Enforce api names to be hookable
afb-hook: Allow to unhook some apis
jobs: Integrate systemd watchdog by default
jobs: Split jobs_get_sd_event
afb-common: Cleanup
afb-hreq: Dichotomic mimetype search
afb-hreq: Sort mimetypes
afb-hreq: Add json to known mimetypes
afb-client-demo: Fix memory leak
afb-api-so: Exclude directories starting with .
afb-binding.hpp: Fix constexpr of 'binding'

6.0.0

genskel: Add afb:: namespace prefix
genskel: Add option for C++ output
sig-monitor: Handle signals in exit
sig-monitor: Make signal list global
afb-hreq: Add predefined mime-types
afb-api-ws: Make weak ws-client by default (to be fixed)
Remove unused and confusing files
jobs: Fix locks in event loops
jobs: Fix possible race condition
afb-config: Check environment variables
jobs: rewrite of the event loop handling
afb-ws & websocket: Fix writing very long data
Add gitreview file for flounder branch
wgtpkg-install: Force uninstall
Version 6.0.0 aka "Funky Flounder"
Add gitreview file for flounder branch
VERSION 5.99.FFRC6
Set version to 5.99.FFRC4
Add the external binding feature
Creates systemd service for APIs
wgtpkg-digsig: Add flag to accept/refuse a WGT without signature
wgtpkg-digsig: Fix digital signature check
Set version to 5.99.FFRC3
wgtpkg-install: Fix SEGV when no icon in config file
Update version to 5.99.FFRC2
afm-user-daemon: Update to future version of app-framework-binder
wrap-json: Update for y/Y
wrap-json: sync with upstream
afm-udb: refactor add_fields_of_content
afm-binding: use binding api v3
afm-udb: split read_unit_file
gitignore: Ignore NetBean project
afm-udb: improve comment
afm-user-daemon: Update to binder changes for bindings v3
afm-binding: fix author
afm-binding: Review of the permissions
afm-binding: Improve comment and strings
afm-system-daemon.service: Fix a typo
afm-system-daemon.service: Fix a typo
CMakeLists: Fix library directories
afm-udb: Fix corrupted memory
afm-udb: fix refcounting error
Refactor user session management
provided.inc: Fix smack label of sockets
afm-user-session: Start target from user session
Update date of copyright notices
Add configuration variables for runtime socket dirs
Provision argument for handling language
afm-user-session: Create afm-user-session
Bump version to 5.99.FFRC0
afm-binding: Allow use of appid instead of runid
afm-binding: Common code getting application id
docs: Add an history

wgt-json: Add comments
Update of src/README.md
gendocs.sh: Fix tabulations
mkdocs: Restore mkdocs feature
unit.conf: Fix Smack permission on api ws
docs: identify revision file
Clean unused afm-main-binding... files
Remove deprecated file afm.h
unit.conf: Refactor PATH and LD_LIBRARY_PATH
simplify afm-user-session process
Improve afm-user-session setup
Avoid implicit Before socket.target
Config for afm-user-session
afm-user-startup.service: Fix type
unit.conf: Fix target name
Add a PAM config file
Rework on systemd start of user sessions
afm-binding: Fix bug in evaluation of runid
unit.conf: Bound start to agl-user-session
unit.conf: Remove unset of capabilities
unit.conf: binder's service of type notify
unit.conf: Fix remaining %t
afm-util: don't reload if afm-install
genconf: set filetype and syntax
afm-unit.conf: Fix missing @ in service name
afm-util/install: use of web socket connection
wgtpkg-unit: remove metadata.app-data-dir variable
afm-udb: add comments
Generate afm-unit.conf using m4
afm-unit.conf: remove invocation of PAM
afm-unit.conf: Add XDG dirs definitions
afm-unit.conf: Add slice indication
afm-binding: Restore previous return for 'start'
Don't rely on features available for user units
Avoid polkit and bug
remove secure-bit directives
bug fixes and improvements
provide access to systemd system
Restore compilation of native-sdk
Remove afm-system-daemon
urun/udb: integration of user UID
afm-user-daemon: rewritten to use direct API
afm-binding: provide afm as a unique binding
utils-systemd: Offer way to set systemd's buses
afm-udb: keep looking at valid units
afm-unit.conf: Removes capabilities of applications
Start user units at the system level
afm-unit.conf: Rename generated systemd units
afm-udb: remove comments and join lines of unit files
Added information to include external library
wgtpkg-unit: improve naming (minor)
Remove legacy mode without systemd
Extend database values with arrays

6.0.0

Include json description for callbacks
Bump version to 4.99-EERC1
Bump doc to 4.99-EERC1
Add gitreview file for flounder branch
Add gitreview file for flounder branch
Add gitreview file for flounder branch
Update sample code using simple libwindowmanager API
Revert "Use appid between homescreen-service and apps"
Use appid between homescreen-service and apps
Fix make widget bug for sample source
Fix problem when pointer is nullptr.
Fix not to release json_object on Event(Reply)
Merge sandbox source code to master
libqtappfw: remove deleteLater instances that aren't used
Add gitreview file for flounder branch
Remove useless QtDeclarative cmake package
network: add wifiStrength property
network: add network model
network: add wifinetworkmodel
add responsemessage.h to headers
add base network module support
libqtappfw: mediaplayer: change from JSON objects to proper Qt model
libqtappfw: vimrc: add correct settings for header files
pbap: add PBAP data backed ContactsModel
pbap: sort and trim contact list
pbap: clear the recent call list before updating
Reorg binding-specific modules into subdirectories
pbap: add contacts support and recent call model
Add core Bluetooth PBAP support
message: add response message support
libqtappfw: mediaplayer: switch from QJsonObject to QVariantMap
libqtappfw: bluetooth: add missing parameter to powerChanged() signal
libqtappfw: message: fix memory leak with QJsonArray
libqtappfw: bluetooth: add initial avrcp controls
libqtappfw: bluetooth: add initial agl-service-bluetooth support
libqtappfw: add response data reporting
vimrc: change noexpandtab to expandtab
vimrc: add project startup file for vim
libqtappfw: mediaplayer: initial agl-service-mediaplayer binding support
weather: add parameter names to signals
Add weather binding support
Add gitreview file for flounder branch
Change gitreview to new location
Revert "Use appid between homescreen-service and apps"
Use appid between homescreen-service and apps
Change library name to qthomescreen without wrapper
Add tapShortcut event for launcher application
Add debug messages for qlibhomescreen
Add comments for qlibhomescreen api
Add gitreview file for flounder branch
Rename libqtsoundmanager for consistency
Clean: source code consistency
Change .gitreview

Add new APIs
 Use inherit instead of using private variable
 Change class name
 Align libsoundmanager
 Add gitreview file for flounder branch
 Add an interface to scalable rendering with multiple resolution
 Change .gitreview
 Rename APIs
 Add screen_updated and error event
 Fix the name of library
 Fix default area
 Add gitreview file for flounder branch
 Change .gitreview
 Add new APIs
 Remove useless code
 Revert "Change package configuration file name"
 Remove redundant functions
 Unify the API name
 Rename the class name
 Add SOVERSION
 Add gitreview file for flounder branch
 Introduce simple API
 Add new parameter 'scale' for multiple resolution
 Change .gitreview
 Bug fix: Enable screenUpdated and error event
 Rename event names to lower camel case
 Rename APIs
 Revert "Change Visible and InVisible event to broadcast"
 Add screen_updated and error event
 Change Visible and InVisible event to broadcast
 Add APIs which can get information about the display and the surface area
 Fix the bug in error case
 Support XDG application
 Remove exit code when the websocket connection is disconnected
 Add boolean to set receive state of diagnostic message.
 Fix: git repo url in documentation.
 Add gitreview file for flounder branch
 src: most: add compile condition to Makefile
 Add gitreview file for flounder branch
 Add gitreview file for flounder branch
 Fix the CAN bus tests
 CAN bus tests
 service-ids-check: Add check uid/gid of services
 Add gitreview file for flounder branch
 Revert "Use appid between homescreen-service and apps"
 Use appid between homescreen-service and apps
 Add an interface to scalable rendering with multiple resolution
 Change .gitreview to src/qtglextras
 Use libwindowmanager instead of qlibwindowmanager
 Fix a runtime error when agl_hmi_framework is not available
 Fix a build error when agl_hmi_framework is not available
 Support desktop pc environment for development
 Add gitreview file for flounder branch

6.0.0

Allow to specify an installation prefix
Add gitreview file for flounder branch
Fix short height of background image
Fix streched background
Allow to specify an installation prefix
Improve ProgressBar and Slider style
ProgressBar: apply the new color scheme for CES2018
Update to new color scheme
Add gitreview file for flounder branch
Add gitreview file for flounder branch
Add gitreview file for flounder branch
Revert "Use appid between homescreen-service and apps"
Use appid between homescreen-service and apps
Improve output of multiple screen resolution
StatusBarModel: fix QQmlContext reference
Change bluetooth status using agl-service-bluetooth
Convert StatusBarModel to get WiFi status info from network binding
Remove useless ref to pulseaudio
Change WindowManager Event Visible to ScreenUpdated
Delete launcher icon area from HomeScreen
Change music name to mediaplayer
homescreen: weather: use signal parameters over properties
homescreen: add OpenWeatherMap data to homescreen
Block launching app when an app is launching
Improve missing icon visibility
Improve management icons of homescreen
Delete unnessary libraries from pro file
Apply LinearGradient to first letters drawn when icon is missing
Revert "Revert "Display blank icon with first letter in new color scheme""
Revert "Display blank icon with first letter in new color scheme"
Fix installation info
Fix volume slider in the media area didn't work
Display blank icon with first letter in new color scheme
Change to new color scheme
Display a blank icon with first letter when icon is not exist
Change shortcut icon radio to hvac
Add gitreview file for flounder branch
Add new APIs
Remove useless code
Revert "Change package configuration file name"
Remove redundant functions
Unify the API name
Rename the class name
Add SOVERSION
Add gitreview file for flounder branch
Bug fix: Enable screenUpdated and error event
Rename event names to lower camel case
Rename APIs
Revert "Change Visible and InVisible event to broadcast"
Add screen_updated and error event
Change Visible and InVisible event to broadcast
Add APIs which can get information about the display and the surface area
Fix the bug in error case

6.0.0

- Support XDG application
- Remove exit code when the websocket connection is disconnected
- Add gitreview file for flounder branch
- Revert "Use appid between homescreen-service and apps"
- Use appid between homescreen-service and apps
- Change library name to qthomescreen without wrapper
- Add tapShortcut event for launcher application
- Add debug messages for qlibhomescreen
- Add comments for qlibhomescreen api
- Add gitreview file for flounder branch
- Add new APIs
- Use inherit instead of using private variable
- Change class name
- Align libsoundmanager
- Add gitreview file for flounder branch
- Rename APIs
- Add screen_updated and error event
- Fix the name of library
- Fix default area
- Add gitreview file
- Add gitreview file for flounder branch
- Add gitreview file
- Add gitreview file for flounder branch
- Fix runxdg.toml params example
- Support passing port/token to XDG app from AGL appfw
- Add example for Video/WebBrowser
- Fix CMakeLists.txt to build in bitbake tree
- RunXDG
